The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 and 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelly (US 4,547,187) in view of Thornton (US 6,811,559), Meythaler et al. (US 6,682,508; hereafter Meythaler), Stone (US 5,293,875), and in further view of Goldberg et al. (US 5,234,409; hereafter Goldberg).

The Kelly patent discloses a lumen having a proximate end and a distal end, an inflatable cuff surrounding the lumen, the lumen having a first and second conduit, the first conduit in communication with the inflatable cuff, the second conduit in fluid communication with the proximate end of the lumen, a port at an end of the first conduit, and a one way valve in the port.

The Kelly patent does not disclose the use of filters at the distal and proximal ends. However, the Thornton patent demonstrates that it is conventional in the art to design catheters with hydrophobic tips; furthermore, in relation to the use of filters in combination with infusion ports, Meythaler demonstrates that such use is well known in the art. Importantly, Stone demonstrates that the use of hydrophobic and charcoal filters is also well known in the art.

Art Unit: 3763

In relation to the amended language in claims 1 and 7, the Goldberg patent demonstrates the conventionality of severing the proximal section of a catheter shaft in order to deflate the cuff and remove the catheter from the body. In column 5, starting in line 29, the specification explicitly states that "[t]o remove the device 10, the end of the conduit 12 is cut with a scissor upstream of the inflation valve 32 in order to bleed the inflation lumen 30 and deflate the bladder balloon 28. The conduit 12 may then be withdrawn from the urethra 22 and discarded".

Based on the above observations, for a person of ordinary skill in the art, the modification of the Kelly catheter with (1) hydrophobic or charcoal filters positioned at the proximal or distal ends of said catheter, as taught by Thornton, Meythaler, and Stone, and (2) the use of a "one-way" valve to completely control the solution injected into the first conduit and allow inflation of the cuff but not allow deflation, forcing the cutting of the catheter to deflate the cuff, as taught by Goldberg, would have been considered obvious in view of the conventionality of these enhancements, and moreover, because by designing the catheter with a one-way valve, medical personnel is forced to destroy the catheter in order to remove the catheter from the body, ensuring that the catheter is only used one time.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel A. Mendez whose telephone number is 571-272-4962. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Nicholas D. Lucchesi can be reached on 571-272-4977. The fax phone
